

**Do you have a child between 6- to 15-year-old who would like to take part in a study on how children and adolescents learn adaptive problem-solving skills?**

**An opportunity to contribute to research by playing online games!**

**What is the research about?**

The aim of this study is to explore how children and adolescents learn to solve problems in new environments

**Why is this important?**

This study will contribute toward the research on teaching children and adolescents how to develop problem-solving skills

**Who can participate?**

Children and adolescents aged 6-15, provided that they can play independently online games using simple functionalities such as clicking and moving an object, and that they have access to a computer or laptop with Internet at home

**What will you and your child have to do?**

**Parent:** Complete questionnaires (10 minutes)

**Child/Adolescent:** Play online games from his/her own home (40 minutes)

Participation is online and completely anonymous

**Please follow this link to participate:**

**Thank you!**
